Collaborative leadership

Collaborations require a type of leadership that differs from conventional leadership in several ways. In collaborations those in leadership roles are not ‘in charge’; their role is to get all members to interact in new ways that tap into, and leverage, individual strengths to create collective outcomes. In this context leadership is focused on facilitating — rather than directing — and safeguarding the collaborative process.  

Another feature of leadership within collaborations is that the role can be shared among multiple participants. The leadership role can shift depending on (a) the phase of the collaboration and (b) the types of expertise of collaboration members. For example, in its early phase a collaboration may need leadership capacity in visioning and relationship building and moulding; latter stages may require expertise in acquiring resources and identifying and leveraging synergies. It is also likely there will be multiple leaders within the collaboration at any one time. The aim is for these participants to read the context and respond when necessary; that is, ‘step up to’ and ‘step back’ from the leadership role as required. 

Leadership in collaborations involves creating the conditions and processes to enable participants to learn about and from each other, appreciate individual strengths and limitations, and look for areas of commonality and joint effort. Most importantly it is about facilitating and maximising synergies between agencies and pushing system and behavioural boundaries to have these realised. “In collaborative leadership the emphasis is less on producing a solution to a known problem and more on developing new ways to reframe situations and develop unanticipated combinations of actions”.

Effective collaborations nurture and build on relationships to produce mutually beneficial outcomes. Collaborative leaders sustain a balance between their facilitative or nurturing functions and the need to drive outcomes. 

Clearly collaborative leadership calls for a different skill set, including abilities to:  

- initiate and nurture relationships  
- be trustworthy 
- build agreement around a collaborative vision 
- articulate and communicate the collaborative vision and the advantages of working that way 
- network within and across sectors to build support for both the initiative and collaborative ways of working

The ARACY Networks have been established to support our work in building cross-sector collaborations capable of implementing action that addresses the complex problems impacting the wellbeing of children and youth in Australia. The six Networks focus on exchanging knowledge and facilitating long-term working relationships and collaborative efforts between sectors and agencies. For more information please contact ARACY on 02 6248 2400.

---

• influence within the collaboration as well as upwards and outwards to other groups and decision makers
• read and diagnose collaborative processes and actions and know when and how to intervene
• see the ‘big picture’: how members are connected and the opportunities for synergistic actions
• take risks and encourage others to be comfortable with taking risks.

The term process catalyst has been used to describe this new type of collaborative leadership.³

**Key aspects of the process catalyst role**

The process catalyst style of leadership draws on the ability to make connections among collaboration participants. This involves articulating what the participants can achieve together and how their joint action can benefit both their individual agencies and the broader community. To do this, the process catalyst needs to focus on building trust and respect among participants. They also need to have a broad vision for what can be achieved and be able to influence members to further shape this vision. Such ‘influencing’ is achieved not through positional authority but by creating a sense of a ‘new whole’ that participants can embrace.

Process catalysts must also create an environment that supports inclusiveness and openness and in which differences of opinion can be voiced and conflict can be effectively managed, harnessed and directed toward goals. The role of the process catalyst leader(s) is to encourage members to learn new ways of behaving and dealing with each other. This can take considerable time and effort, so collaborative leaders must keep members engaged and committed to the vision through a regular process of checking-in.

As process minders, collaborative leaders must also constantly monitor and review the interactions and processes. If the collaboration is struggling, the interaction has become stagnant or stale, or commitment is wavering, leaders need to be able to respond — for example, by reinvigorating it with new ideas or implementing new processes. Similarly, there is a need to remain alert for interaction blockages and ‘toxic’ members, including ‘fence sitters’, who contribute little and can undermine the collaborative spirit of other participants.

Collaborative leadership also requires an understanding of, and focus on, the constraints and opportunities that result from the environment in which collaborations operate. This includes getting buy in, not only from participants within the collaboration, but also from their parent organisations and other key stakeholders that could have an impact on the success of the endeavour. Collaborative leaders will also be actively engaged in ‘selling’ the advantages of the initiative and promoting the spirit of collaboration to influential decision makers within government, business and the community sector.

**Conclusion**

Effective collaborative leadership requires the ability to recognise, and capitalise on, the unique features of the collaboration process. This is not the type of leadership most sectors or professions are producing or demanding. But when this type of leadership is enacted in a collaboration, it can make a difference to the success and outcomes of the effort.

Australian Research Alliance for Children and Youth

The Australian Research Alliance for Children and Youth (ARACY) is a national non-government organisation which focuses on bringing together researchers, policymakers and practitioners, to turn the best evidence on ‘what works’ for child and youth wellbeing into practical, preventative action to benefit all young Australians. We are making this happen by creating collaborative opportunities, through our Networks, events, state convenor activities and regular publications, that work to break down traditional barriers in addressing the major problems affecting our young people.

About the authors of this fact sheet

Dr Robyn Keast has an extensive background as a practitioner, policy officer and manager within the public and non-government sectors in Australia, New Zealand and Canada. She works with the Queensland University of Technology as a Senior Lecturer with interests including networked arrangements, network analysis and innovation, global trends in business management and government/business relations. In addition to her internationally recognised research, Robyn is a practitioner, having led and consulted on a wide variety of collaboration projects.

Dr Myrna P. Mandell is Professor Emeritus at California State University, Northridge, and a Visiting Faculty at Southern Cross University in New South Wales, Australia. Her work includes articles, books and chapters on a number of different facets of networks, including: how to organise and manage networks, performance measures for networks, and leadership in networks. She has also done workshops, presentations, and projects as a visiting professor internationally and is also the co-author of a number of publications on collaboration through networks specifically for practitioners in the public and non-public sectors. She recently co-edited a book on building theories of networks that is due to be published in 2013.
